info@3RingSilencer.com

3 Ring Silencer Corporation was founded on a lifetime of interest and enthusiasm in all things gun related. As an avid gun collector with a love of shooting and a 25+ year background in the manufacturing industry, producing silencers was a natural next step.

In our development process we worked to improve the properties of many existing suppressor systems and we ultimately developed a variety of our own designs and versions.

We continue to research and develop our suppressors trying to bring them closer to the ideal.

Along the way, we have made the necessary modifications to improve ourselves and our products. 3 Ring Silencer's suppressors begin with first impressions and quality you can see and touch. The front and rear of the suppressor tube features impeccable knurling which aids installation and removal. The knurling is also handy when field-stripping the suppressors recoil booster device. Knurling on pistol suppressors is rare but we pride ourselves in taking this extra effort.

Our innovative team never rests and we are constantly setting new goals for ourselves.
